Mini Mag Antenna

Location

This antenna must be placed on a metal surface to be effective, it has a magnetic base for surfaces such as steel or iron, but will work on other metals as long as it is held in position. The antenna should be placed in the centre of the metal plate/area, and the omni-directional whip needs to be vertically aligned.

Connecting the Antenna to an Adapter

When connecting the antenna to a phone adapter, push the two connectors together before screwing them tight, so that the centre pin goes all the way in.

Signal Troubleshooting

If you see no improvement in signal you should check the phone adapter is connected to the antenna cable correctly. If this doesn't work try calling out from the handset as this may help wake up the handset and find a signal.
